

# TRAINING SERVICES

## Engineering Client Success

*When your staff needs industry-specific training, call on TEC's Team of experienced environmental professionals to assist you. We will provide professional on-site customized training classes to keep you and your staff compliant with current occupational health and environmental regulations.*

### Asbestos Awareness and Category-Specific Training

Our trainers have technical backgrounds and can speak from experience when working with your staff. We find that this combination of expertise and experience in the field is most desired by our clients. Classes can be tailored to meet your specific needs. Asbestos Training includes:

- Two-hour Asbestos Training and Annual Refresher
- Class III Asbestos Operations & Maintenance Training and Annual Refresher

### Environmental Health & Safety (EHS) Training

Let us assist you with the task of maneuvering through the maze of Environmental Health & Safety (EHS) Compliance regulations. Our EHS professionals can provide training on the following topics:

- Bloodborne Pathogens
- Confined Space Entry
- Integrated Pest Management
- Lockout / Tagout (Control of Hazardous Energy)
- OSHA Compliance
- Respiratory Protection
- Hazard Communication (Right to Know)

### Indoor Air Quality (IAQ) Training

Our credentialed and experienced industrial hygiene professionals are skilled at providing informational presentations and required training programs for our industry professionals. We can provide instruction on the following topics or tailor the subject matter to meet your specific training needs.

IAQ Topics include:

- Water Infiltration and Mold in Buildings
- Maintaining IAQ During Construction / Renovation
- Maintaining Acceptable IAQ in Occupied Buildings

### Lead-Based Paint Training

Friction, demolition and renovation activities can disturb surfaces that contain lead-based paint. Lead-based paint dust has the potential to be hazardous if inhaled or ingested. We can train your staff to be aware of the facts before you have an issue. TEC's professional trainers can provide:

- Two Hour Lead Awareness

### Storm Water Management Training

Storm water in your environment is impacted by common practices and the condition of developed properties. TEC's trainers have developed a program to assist you in limiting negative impacts associated with pollutants, sediments, fertilizers, and illicit discharges. TEC is also available to assist you with your NPDES permit compliance.

If you're interested in getting more information, setting up a training program, or requesting a proposal, contact: Scott Chandler, CIH, LEED AP at 248.588.6200 / [schandler@tectest.com](mailto:schandler@tectest.com)
